Mah Milk Extra

Mah Milk Extra

Milk soluble supplement for calf

Raising a calf is one of the most significant issues in industrial dairy farming that we are dealing with and has a dramatic effect on the economic span of this industry. Maintaining and increasing the herd's potentials are all depend on correctly performing calves raising programs. Among all the measures, diet management of the calves has the utmost importance.

Mah Milk Extra has been formulated as a milk soluble supplement for dairy farms that use whole milk or unsaleable milk to feed their calves. Characteristics of this product are good solubility, appetizing compounds and, high levels of Vitamins and minerals.

The product also contains probiotics and prebiotics that provide beneficial flora and prevent pathogens from growing inside the digestive system. Mah Milk Extra has good solubility and, to make it more palatable appetizing and savory compounds were added to it.

Mah Milk Extra contains all water-soluble Vitamins, B vitamins, minerals such as Iron, Zinc, Copper and, Manganese in chelate form. The cow milk is deficient in some Vitamins like A, D, and, E which causes health and growth problems for calves. On the other hand, because the gastrointestinal system of the calves is not fully developed, the production of B vitamins can not fulfill the requirements. Thus, to rectify these deficiencies, A, D and, E Vitamins are added to the composition.

Other than those Vitamins, Mah Milk Extra contains Thiamine, Riboflavin, Niacin, Pantothenic acid, pyridoxine, Folic acid, Co-balamin, Biotin, Choline chloride, Antioxidants, Cobalt (Cobalt sulfate), Iodine (Calcium Iodate) and, Probiotics.

Composition Level

15-25 gr/L of milk

Packing

Three-layer 25 Kg packs

Storage conditions

Keep in a cool and dry place away from direct sunlight.

Shelf life

12 months after production
